Recitation 5

Load the nycflights13 package.

1. Find all the flights that flew to Houston (IAH or HOU).

2. Find all the flights that were operated by United, American, or Delta.

3. Sort flights to find the most delayed flights.

4. Sort flights to find the fastest flights.

5. Subset the data so you have just the year, month, day, hour, and minute columns.

6. Add a new column where you've converted the hour column to minutes and added them to the minute column.

7. Find the average departure delay time groups by carrier.
